

	TECHNICAL SHEET	ST 014 Rev. 5 13.03.2026
	CLEANING INSTRUCTIONS FOR STAINLESS STEEL SHEETS	Pag. 1 of 3

SUMMARY

1. PURPOSE OF THE DOCUMENT
2. CLEANING PRODUCTS
3. CLEANING INSTRUCTIONS

Rev.	Date	Modification's nature
0	20/06/03	First issue
1	15/02/12	General revision
2	16/05/12	Modified par. 2
3	06/11/17	Modified par. 3
4	20/06/22	Added cleaning instructions for sheets treated with anti-fingerprint treatment
5	13/03/2026	Revision of products not recommended for cleaning

	TECHNICAL SHEET	ST 014 Rev. 5
	CLEANING INSTRUCTIONS FOR STAINLESS STEEL SHEETS	13.03.2026 Pag. 2 of 3

1. PURPOSE OF THE DOCUMENT

This technical sheet briefly outlines the cleaning methods required to preserve the properties and characteristics of our stainless steel over time.

2. CLEANING PRODUCTS

Products to use:

- Nitro solvent (acetone for removing silicone)
- Liquid detergents or glass cleaning products (free of abrasives and chlorides)
- Neutral liquid soap (for persistent dirt)
- Soft cloths (to be used along the grain; never across it)

PLEASE NOTE: sheets with an ANTI-FINGERPRINT coating must only be cleaned using neutral liquid soap and soft cloth.

DO NOT USE:

- Products containing chlorides, especially hydrochloric acid
- Detergents containing halides
- Detergents containing hydrogen peroxide
- Bleach or products based on hypochlorous acid
- Products containing strong acids
- Cleaners containing abrasive powders
- Silver cleaning solutions
- Detergents of unknown chemical composition
- Steel wool, brushes, or abrasive pads
- Rough cloths or paper
- Tools previously used on other metals or alloy surfaces
- *Pre-impregnated wipes containing products other than those previously recommended*
- *Commercial products for stainless steel, in both liquid and spray form*

3. CLEANING INSTRUCTIONS

After removing the protective film, if any marks or stains are present, first clean the steel with a nitro solvent or acetone, then perform a second cleaning with neutral soap or a liquid detergent, using only soft cloths and moving along the direction of the finish; never use circular or transverse movements.

PLEASE NOTE: sheets with an ANTI-FINGERPRINT coating must only be cleaned using neutral liquid soap and soft cloth.

	TECHNICAL SHEET	ST 014 Rev. 5
	CLEANING INSTRUCTIONS FOR STAINLESS STEEL SHEETS	13.03.2026 Pag. 3 of 3

Routine Cleaning

For routine cleaning, it is recommended to use neutral soap or liquid detergent with soft cloths, always wiping along the direction of the finish and never using circular movements.

Cleaning should be performed before excessive dirt accumulation occurs, which could cause abrasion, thus minimize the risk of scratching or altering the surface appearance.

Regular cleaning is required in areas exposed to aggressive environments, such as industrial or atmospheric pollutants and traffic deposits, to prevent excessive dirt accumulation.

Before washing, remove any dust particles using compressed air or a vacuum to prevent friction on the surface.

When water is used for cleaning or rinsing, especially in areas with significant limescale presence, it is recommended to dry the surface to prevent the formation of stains.

To avoid iron contamination, ensure that the cleaning tools have not been previously used on other metals or alloys. Materials and tools used for cleaning stainless-steel products must be exclusively reserved for this purpose.

Under no circumstances should the sheet surface be rubbed by hands.

During routine cleaning, pay particular attention to covered areas to ensure removal of airborne contaminants.
